

Show Stream Data Aggregation and Analysis with SQL

*All SQL Query and Table generation done in BigQuery

The screenshot shows the Google Cloud BigQuery interface. The left sidebar displays a project named 'my-project-lab-learning' with various resources. The main panel shows the 'show_stream_accounts' table schema. The schema table lists the following fields:

Field name	Type	Mode	Description	Key	Collation
customer_id	STRING	NULLABLE	-	-	-
account_id	STRING	NULLABLE	-	-	-
subscription_type	STRING	NULLABLE	-	-	-
subscription_amount	STRING	NULLABLE	-	-	-
subscription_operating_cost	INTEGER	NULLABLE	-	-	-
subscription_duration	INTEGER	NULLABLE	-	-	-
cancel_validation	BOOLEAN	NULLABLE	-	-	-
cancel_reason	STRING	NULLABLE	-	-	-

Buttons at the bottom include 'Edit schema', 'View row access policies', and 'Describe data'.

The screenshot shows the Google Cloud BigQuery interface. The left sidebar displays a project named 'my-project-lab-learning' with various resources. The main panel shows the 'show_stream_subscribers' table schema. The schema table lists the following fields:

Field name	Type	Mode	Description	Key	Collation
customer_id	STRING	NULLABLE	-	-	-
customer_first_name	STRING	NULLABLE	-	-	-
customer_last_name	STRING	NULLABLE	-	-	-
city	STRING	NULLABLE	-	-	-
state	STRING	NULLABLE	-	-	-
subscription_start_date	DATE	NULLABLE	-	-	-
subscription_end_date	DATE	NULLABLE	-	-	-
status	STRING	NULLABLE	-	-	-

Buttons at the bottom include 'Edit schema', 'View row access policies', and 'Describe data'.

Code Block

Selecting all relevant columns from t1 show_stream_accounts table and t2 show_stream_subscribers table.

```
SELECT DISTINCT -- Distinct to avoid duplicates
  t1.customer_id,
  t1.account_id,
  t1.subscription_type,
  t1.subscription_amount,
  t1.subscription_operating_cost,
  t1.subscription_duration,
  t1.cancel_validation,
  t1.cancel_reason,
  t2.customer_first_name,
  t2.customer_last_name,
  t2.city,
  t2.state,
  t2.subscription_start_date,
  t2.subscription_end_date,
  t2.status
FROM `my-project-lab-learning.show_stream.show_stream_accounts` AS t1
FULL OUTER JOIN -- Full outer join to include all rows from both tables
  `my-project-lab-learning.show_stream.show_stream_subscribers` AS t2
  ON t1.customer_id = t2.customer_id
WHERE t1.customer_id IS NOT NULL; -- Filter to only include rows where customer_id is not null
```

Code Block

4 Year Analysis

Creating New Table for with calculation for the following Columns:

Year, New Signups, Cancellations, Net Growth, Revenue, Cost, Gross Profit, Profit Margin

```
SELECT
    EXTRACT(YEAR FROM t2.subscription_start_date) AS Year, -- Set up for Years 2022, 2023, 2024,
2025
    COUNT(DISTINCT t1.customer_id) AS New_Signups,
